FULWOOD'S

Frost-Proof

CABBAGE PLANTS

Ready September
1st to June 1st

EARLY JERSEY WAKEFIELD

Many market gardeners consider this the very best Cabbage grown. Its merits are many, among which are medium heads, for an early variety, small outside foliage, and uniformity of crop. Heads are white, solid and tender. This variety always brings a good price because of its earliness and it is therefore a good money-maker.

CHARLESTON WAKEFIELD

This Cabbage is much like the Jersey Wakefield. It has a much larger head, however, and is about ten days later. This is a desirable variety for shipping purposes as the heads are solid and firm. It is a strong favorite with growers for a main crop.

COPENHAGEN MARKET

A fine Cabbage. This variety is nearly as early as the Jersey Wakefield. The stem is short, has large round and solid head with few outer leaves, of an upright growth. My stock of this popular variety is extra early, uniform and dependable.

GOLDEN ACRE

Golden Acre is very similar to Copenhagen Market, being a few days earlier. The plants usually produce marketable heads in 65 to 70 days, which is as early as the Early Jersey Wakefield. It is a round headed variety for market gardeners and shippers.

I am buying cabbage seed from Ferry-Morse Seed Co., paying twice as much as other growers pay for their seed. I do this to give you the very best plants that will be uniform in size, head up true to name. In fact, this is the very finest seed that can be used, and you could not take chances on planting any plants except those you know would give you perfect satisfaction.

FULWOOD'S GENUINE *Frost-Proof* PLANTS

Ready Sept. 1 to June 1
Wilt-Resistant Varieties

MARION MARKET

This is also offered as Wisconsin Copenhagen and is a very important mid-season yellows-resistant sort of Cabbage for kraut manufacture and market. This variety has prominent globular heads which approach those of Glory of Enkhuizen in size, and it produces a heavy yield on yellows-infested soil where ordinary varieties fail.

EARLY FLAT DUTCH

One of the oldest varieties. The head is usually large and flat, tender and fine grained. My strain of this Cabbage is of the best to be had. It is excellent for a tonnage crop because of the large heads.

WISCONSIN ALL SEASON

This is a yellows-resistant strain developed at the Wisconsin Experiment Station by selection of healthy plants out of standard All-Seasons grown on infested land. Wisconsin All-Season is a very valuable, heavily productive, hard-headed variety of particular merit for use in yellows-infested localities and it is well adapted for kraut and for winter use.

GEORGIA BLUE STEM COLLARD PLANTS

These plants are very much like the Cabbage plants. They grow from two to three feet tall, with light green, tender leaves on long stems. They withstand heat and have an excellent flavor when cooked. I have a good supply on hand the year round and can make prompt shipments at the same price as Cabbage.

Money saving postpaid plant collections will be found on next to the last page
in this catalog.

FULWOOD'S GENUINE *Frost-Proof* ONION PLANTS

LIKE all Genuine Fulwood Vegetable Plants, my Onion plants are grown, packed and shipped with the utmost care and precision. Plants are grown from the finest seed I can obtain. All seed is treated before planting and plants are sprayed during the growing period and thus you are assured of good, healthy, strong plants. Because they are grown in the open field and are subject to light frosts during the growing period, they are Genuine Frost-Proof plants and will stand temperatures as low as 18 to 20 degrees above zero without injury. Onions grown from Fulwood's Genuine Frost-Proof Onion plants are also an excellent

money crop, as they can be marketed at least two weeks in advance of Onions grown from sets and way ahead of Onions grown from seed. Furthermore, my plants will make much better Onions than those grown from sets, the Onions being larger and they do not run to seed. They will also keep much better when cured and stored.

My Onion plants should be set out the same time as my Cabbage plants, and you can order them for shipment at the same time. My Onion plants are not to be confused with cheap Texas plants kept on storage. Order my fresh pulled plants for a bumper crop on Onions.

Varieties

CRYSTAL WAX BERMUDA

Probably the best selling Bermuda Onion on the market because of its exceptionally attractive appearance. It has the same general appearance as the Yellow Bermuda except that it is crystal white and waxy. Because of its sweet, mild flavor, like the Yellow Bermuda, this is an excellent eating Onion.

SPANISH VALENCIA

(Or Sweet Spanish)—This variety can be grown in warm climates as successfully as the Bermuda varieties and much more successful in Northern climates. This is a large globe-shaped brownish yellow Onion of large size. The flesh is white, fine-grained, mild and sweet enough to be eaten like an apple. A good keeper and fine shipper when properly cured. Has been known to yield 1,200 bushels per acre. Fulwood's Genuine Frost-Proof Onion plants are ready for shipment any time from September 1st to June 1st, following. All Onion plants are tied in bunches of 100 plants. Onion plants are priced the same as Cabbage plants, for all varieties, and should be set out the same time. I will gladly mix an order, shipping part Onion plants and part Cabbage plants, if you desire.

YELLOW BERMUDA

This is the most widely grown of all Bermuda Onions. No sweeter Onion is grown than this, and it always has a ready market and is a large producer and a real money-maker. Whether grown for marketing or for your own table use, you can make no mistake in ordering this variety.

Ready September 1st to June 1st

FULWOOD'S *Tomato* PLANTS

Acres of tomato plants ready for shipping

Ready April 1st to June 15th

SHIP more Tomato plants than any other grower, shipping them by millions to practically every state in the Union, to both large and small canning factories, truck farmers, gardeners, and to individuals who grow tomatoes for their own use. I have developed these varieties to a very high state and my plants are exceptionally rooted, large and stocky. They are all open field grown and are acclimated to outside temperatures and will start growing quickly and produce rich, red ripe Tomatoes much earlier and more surely than home-grown plants. Tomato plants are not frost-proof, however, and should not be ordered shipped until all danger of killing frost is passed. My Tomato plants are not perishable and when packed as I pack them, in deep, damp moss, they will keep in good condition for several days.

In growing my Tomato plants I use the very finest Certified seed I can buy and plant only on new land. The plants are sprayed continuously to prevent disease, and when ready for shipment, plants are pulled one at a time and the roots are well wrapped in damp moss. These Tomato plants can be shipped successfully to all parts of the United States.

DESCRIPTION OF VARIETIES OF TOMATO PLANTS

GREATER BALTIMORE is similar to the Stone, heavily productive and very valuable for canning. Fruits are scarlet-red, large, commonly weigh six ounces; deep but flat; smooth, very firm and solid.

MARGLOBE is a splendid type for earliness and uniformity; particularly valuable for shipping; definite disease-resistance recommends this type for use in sections infested with Fusarium Wilt and Nail-head Rust. Plants thrifty and heavily productive, of long bearing period. Fruits uniform deep scarlet; large; uniformly globe shaped; smooth, solid and of distinct quality.

BONNIE BEST is unexcelled as a general purpose Tomato; very valuable as a canning and shipping variety in northern sections. Fruits evenly colored bright deep scarlet-red; medium large; flattened globe shape; smooth and firm.

PRITCHARD (SCARLET TOPPER) is a very promising, heavily productive wilt-resistant variety for home and market garden, shipping and canning. Fruit large, globe shaped, scarlet and well colored about the stem end; flesh firm and of fine quality.

RUTGERS is highly recommended as a second early maturing variety for canning and Tomato juice. Fruits are of medium to large size, similar in shape to Marglobe, but slightly more flattened.

Prices by parcel post, prepaid:

12 plants for	-----	\$.20
100 plants for	-----	.60
500 plants for	-----	2.00

FULWOOD'S PEPPER PLANTS

Not Frost-Proof. Ready April 1st to June 15th

California Wonder Variety—This is an outstanding medium large variety for market garden and shipping. Plants vigorous, prolific. Fruits 4-lobed, chunky; very attractive, smooth, uniform and deep green, changing to bright crimson; flesh thicker than any other variety, sweet and mild.

PIMENTO VARIETY—Pre-eminently a canning variety; good also for home and market garden planting. Plants large, erect, prolific. Fruits heart-shaped, very smooth; color dark green, changing to bright crimson; flesh exceptionally thick, sweet and mild.

PLANTING NOTES: When plants arrive, if your ground is not in condition to plant right away, take the plants out of the crate, cut the bands, spread them out and place the roots in soft mud. In planting, pack soil well around the roots, pouring water in the hole after the plants are set out. Throw loose dirt around the plants after watering to keep the wet soil from drying out.

SPRAYING NOTES: For leaf-eating insects, such as green worms, use (1) one part of arsenate of lead and (3) three parts of hydrated lime. Dust heaviest where worms are most abundant. Repeat every ten days until worms are controlled.

For sucking insects, such as lice, use 12 ounces of nicotine sulphate to nine pounds of lime. Dust during the hot part of the day when the wind is not blowing.

For protection against disease, use bordeaux (four pounds copper sulphate, four pounds stone lime) to 50 gallons of water. It is necessary to get a complete coverage to stop the spread of fungi.

WHAT FULWOOD CUSTOMERS SAY

"Plants arrived O. K. Am well pleased. Don't see how you can afford to do it."—Mrs. Fannie Kemp, Dubuque, Io.

"Received my Tomato Plants and am well pleased with them. Very sturdy plants and received in O. K. condition."—Geo. W. Leckrone, Salem, Ill.

"I am writing to let you know how I liked the plants I received from you. I was very much pleased as there are none of the quality and low price of yours available here. The stock generally for sale is of inferior quality and high in price. Your tomatoes were very good, being larger and

stockier than I expected to get. The cabbage was also good.

I don't believe the service that you offer is generally known, at least among home gardeners, as those I know never ordered any plants from the South; they bought locally or raised their own.

I assure you of my business next year and would be glad to recommend you to anybody."—Roger O. Kuhns, Pittsburgh, Pa.

WHY I DO NOT MEET COMPETITION

There are so many plant growers using cheap seed that will not head satisfactorily and are not sprayed, kept free from insects, as mine are, therefore, I cannot meet these cheap prices. I put more into my plants to give a customer the very best to be had, and have figured my prices as low as good reliable plants can be grown.

Picture below shows a corner of seed testing and treating laboratories with Paul Fulwood, Jr., Pathologist in Charge. This assures you plants free from disease or insects.

I reserve the right to substitute some other good variety or other kind of plants for any plants listed which I may be out of at the time your order is received. I believe I have ample plants of all kinds to fill all collection orders as listed, however.

FULWOOD'S GENUINE FROST-PROOF CABBAGE PLANTS

● Vegetables sold early in the season bring many times the price of those marketed several weeks later. Fulwood's Genuine Frost-Proof plants produce from two to three weeks before home-grown plants—and that's why they are real money-makers for the buyer.

● Here at Tifton, Georgia, where my plantation is located, the soil and climatic conditions are ideally suited for growing tough, hardy, healthy plants in the open field during the winter and early spring. The plants make a slow but steady growth and when eight or ten weeks old they are extremely tough and hardy. In this condition they can be shipped to territory farther north and be planted in the open fields there a month or six weeks earlier than home-grown, hot-bed, or cold frame plants.

● These Frost-Proof plants will stand temperatures of 18 to 20 degrees above zero without injury. Freezing of the soil or covering of the plants with ice, sleet or snow after they have been planted will not injure them unless the temperature gets below 18 to 20 degrees.

● Because my plants are so strong and healthy, and because they can safely be planted considerably in advance of home-grown plants, is the reason for their being able to make large, extra early crop—all ready for market during the time prices are high. Many unreliable growers are selling plants and calling them "Frost-Proof." In many instances these growers are located where they do not have frosts during the growing period and, therefore, the plants they are offering have never been subjected to the frosts.

Send your orders to P. D. Fulwood, Tifton, Ga., for quick shipments of guaranteed plants.

This machine, developed by the Tobacco By-Products Corp., is used by me, at great expense, to keep the plant fields free from aphids.

PLAY SAFE WITH FULWOOD'S GUARANTEE

I guarantee all of my plants to be exactly as described in this catalog. Fresh pulled day order is received (where weather will permit). Plants pulled one at the time, counted and packed to carry to your home in good condition. Any plants arriving in bad condition will be reshipped at once, provided you notify me within five days. When you purchase Fulwood's plants you will receive full count, no runts, no diseased plants, and you will receive the exact varieties ordered.

I send you only the highest quality plants and gladly stand back of them. However, weather, soil, and care also influence crops, so in no case shall I be responsible for any amount beyond the purchase price.

P. D. Fulwood
